IOWEALTH

KING OF ALL HYBRIDS

You Get ALL THIS

When You Plant IOWEALTH

- Corn you can feed. Iowealth is ONE hybrid that's bred for kernels with the soft, floury starch. Not a hard, flinty hybrid in the entire Iowealth series.
- Good yield. Official yield test records almost always show Iowealth at the top of the list.
- Drouth Resistance—Wind Resistance. Straight, strong stalks, together with roots that sink down eight feet, make Iowealth one of the most drouth and wind resistant of all hybrids.
- Easy Picking, by hand or machine. That means less labor costs, less time in the field.
- Disease Resistance—Gives you better grading, more profitable corn.
- There's not one hard, flinty hybrid in the entire Iowealth series. It's the favorite hybrid of feeders. Plant Iowealth and take advantage of high hog and cattle prices.

We present for your use **Iowealth Hybrid Corn**

Varieties maturing from 90 days to 120 days, the latter maturing the deeper the grain and heavier yielding.

WESTERN COLORADO GROWN "MILE HIGH"

U. S. VERIFIED ORIGIN ALFALFA SEED

LADAK. A wilt-resistant variety, is slow to start in the spring, but it resists drought and produces a good yield of hay. Leafy and of high feeding value, and will hold a stand longer than other varieties.

COMMON. Deep-rooted. Excellent for hay; but must have a deep soil. Therefore, if you do not have over two and a half feet of good soil to water, shale, or gravel, we suggest that you use Grimm.

GRIMM. Has a spreading root and lives from surface soil. Will withstand severe freezing; does not winter kill; better adapted to extreme northern and high altitude growing.

MEEKER BALTIC. A distinct variety; same root system as the Grimm. Originated at Meeker, Colorado, on dry land. See Yellow Price Sheet for prices.

STRAWBERRY CLOVER

Western Colorado grown seed. It thrives on wet, seepy soil, even though it is crusted with alkali. Best suited for pasture; spreads from root and seed—a perennial plant. Requires 3 lbs. of seed per acre. For best results, sow in rows with garden seed planter. See Yellow Price Sheet for prices.

GRASS SEEDS

REED CANARY GRASS—Is one perennial grass that will thrive in marshy places, stands under water for weeks without injury, yields enormous tonnage of hay with feed value equal to wheat bran. Sow any time before June 20th at the rate of 10 to 12 pounds per acre, broadcast. It forms a sod rapidly through the spreading of underground roots. Makes your lowlands grow profitable crops.

CRESTED WHEAT GRASS (Standard or Forage Strain)—Is a drought-resistant, long-lived grass.

CRESTED WHEAT GRASS (Fairway Strain)—This differs from the above in that it does not grow quite as tall and is more leafy and under most conditions will produce as much hay per acre as the Standard Strain. The Fairway has more uses and can be used in lawns, fairways, boulevards, school yards, parks, farm lawns and in areas where water is not readily available.

PERENNIAL RYE GRASS—A very valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow 30 to 40 pounds per acre in spring.

BROME GRASS (Bromus Inermis)—Yields enormous crops of splendid hay, and affords early and abundant pasture.

MEADOW FESCUE, or ENGLISH BLUE GRASS—Of great value for permanent pasture and for hay. Does best on strong land.

PERMANENT PASTURE MIXTURE—We highly recommend the following ratio for a well balanced permanent pasture mixture: 30% Orchard Grass, 30% Brome Grass, 20% Perennial Rye Grass, 12% Timothy and 8% Yellow Blossom Sweet Clover. Sow 25 to 30 pounds per acre. Sow broadcast, cover lightly and keep wet until well started.

ORCHARD GRASS

Often sown with Alfalfa to give a stronger and better hay. It will stand drought or will do well in the shade. Orchard Grass gives a heavy tonnage in permanent pasture, furnishes the first green bite in the Spring and the last in the Fall.

SUDAN GRASS

One of the best catch crops to plant when late seeding is necessary. Can be cut every six weeks until frost. Frost kills it entirely. A real drought resister, renewing its growth immediately when rain comes. An enormous hay yielder and the hay can be fed in unlimited quantities without any danger to stock.

SOY BEANS

Soy Beans are valuable for hay, seed, or for soil improvement, are easy to grow and are valuable for soil too poor for other legumes. They withstand both drought and heat well, make a good emergency crop, as they can be sown late.

Soy Beans, as a hay crop, are higher in protein content than clover hay.

ILLINI—(110 days.) Is an early yellow variety, grows taller and a better yielder than most varieties.

EARLY BLACK WILSON—(120 days.) A very prolific variety. Average height on good land is about 3 feet. Considered the best hay variety.

See yellow price sheet for prices on all the above seeds, also for a complete list of all field seeds including Seed Wheat, Oats, Barley, Rye and Corn. Field Peas, Soy Beans, Kaffir Corn and all Sorghums.

Regret that space will not permit descriptions on all these items, however, you will find our stock complete.

Quality is protected on all these seeds by the MILE HIGH Brand. Perhaps you are familiar with our High Altitude Grown Seeds and know the results that can be expected from them.

CYCLONE SEED SOWER

**Zinnia Dahlia
Flowered Mixed**

ZINNIA SUPER CROWN O'GOLD PASTEL TINTS

1274 This is the very finest large flowered Zinnia introduction since the original Dahlia Flowered. Flowers are large and showy, 5 to 5½ inches in diameter. Strictly a mixture of pastel tints, it contains a wide range of pastel shades, including soft yellow, old gold, light pink, apricot pink, various shades of salmon, peach and buff, lively cerise salmon, as well as pure white and cream. All of the flowers carry the characteristic Crown O'Gold markings, that is, each petal of the flower is overlaid at the base with a deep golden yellow while carrying out the individual flower color at the tip. Plants are strong and robust, growing about 3 feet tall. Flowers are borne profusely throughout the season. **Pkt, 5c.**

LILLIPUT ZINNIAS

The small, pompon-like flowers of Lilliput Zinnias are exquisite and most appealing. Plants are dwarf, bushy and very branching; 12 to 18 in. tall, and literally covered with double blooms, 1 to 1½ in. across. Nice as edgings to other plants or taller growing zinnias.

1282 Finest Mixed, from named varieties.

Lilliputs—Pkt, 5c; ¼ oz, 20c; 1 oz, 60c.

NEW CUPID ZINNIAS

1288 Compact plants, about 1 ft. tall, consist of a large number of slender branches, each bearing a double flower which hardly exceeds 1 in. in diameter. Plants are very floriferous; a mass of color through the summer and fall; especially adapted for borders, bedding and rock gardens and as miniature cut flower. They are as easy to grow as any zinnia. **Pkt, 5c.**

CRESTED ZINNIA

1275 Mixed. 2½ ft. On a single corona of outside petals stands a semi-globular crown with a large number of small florets giving a most interesting effect, similar in form to the flowers of the Scabiosa. **Pkt, 5c.**
